DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 10 is rejected under 35 U.S.C. 102(e) as being anticipated by Koyama US 6,380,007.

Koyama discloses a method of making a pixel cell including providing a substrate (400) defined with a plurality of active areas (511-519), forming at least one gate (502) on the substrate covering a portion of the active area, forming source/drains (511-513) in the active area not covered by the gate, forming a first dielectric layer (430) on the substrate to cover the gate and the source/drain, forming at least one pixel cap top plate (504) atop the first dielectric, forming capacitor dielectric layer (440) atop the surface of the top plate, and forming at least one pixel cap bottom plate (520) atop the first dielectric layer (see figs. 12-14 and related text). Koyama also teaches forming at least one row select line (165) electrically connected to the gate.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2822

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7, 9-17 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koyama as applied to claim 10 above, and further in view of Applicant's Admitted Prior Art (AAPA).

Koyama teaches the method as described above.

However, Koyama does not disclose using the same materials or process techniques as the applicant.

The AAPA (figs. 1-7 and related text) teaches using the same materials and process techniques in forming pixel cell as claimed by applicant. Therefore, it would have been obvious to one of ordinary skill in the art to use these materials and techniques because they are well in the art of pixel formation and are cost effective.

Claims 8 and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
